

## TOUGHENED GLASS SNEEZE SCREENS

Showmaster toughened glass sneeze screens are produced in 6mm PAR glass. We have the single curve VB1441AE and the double curved VB1442CG. Both of these models have pre-drilled holes and both are available in three different lengths.

Our third sneeze screen in the range is the C-Type, this screen does not have any holes and is available in four lengths. These glasses are also produced in 6mm PAR. As with all of our toughened glass range the length, depth and position of holes can be altered by supplying our non-toughened glass with a safety film.
